

Solar Road Studs & T25-CCTV Launched at Road Expo Scotland 2011

Mobile Traffic Solutions (MTS) and Rennicks UK, Part of the Rennicks Group are showcasing an innovative range of intelligent traffic management solutions and Nikkalite® retroreflective materials at Road Expo Scotland 2011.

With an ever increasing need to switch off road lighting during night time hours to conserve energy and reduce costs, the Highways Agency, Local Authorities and Traffic Management teams are very aware of the problems which may arise as a result of reduced night visibility. Rennicks UK are always seeking to find innovative solutions and as a result will be launching a new range of solar powered road studs at the Road Expo, Scotland show. The SR Active Road Studs range offer a bright alternative to traditional cats eyes.

Iain Borthwick, Managing Director for Rennicks and MTS said 'using bright LEDs together with an innovative internal prismatic reflection system (RPI), the SR Active Road Studs range allow unique perception levels, making them one of the brightest and most reliable products on the market today'. Iain Borthwick added: 'With their low power consumption and high autonomy, they are ideal for places with no power source and an excellent solution to safer driving in the dark.'

MTS
THE SIGN OF INTELLIGENCE

Rennicks_{U.K.}
CLEARLY BETTER

Mobile Traffic Solutions are also featuring a new innovative product at the show, the T25-CCTV. This fully autonomous CCTV platform is ideal for temporary surveillance applications where power and local fixing points are not readily available. The battery powered, solar recharge T25 trailer provides a stable platform for the Award winning Wireless CCTV 3G Mini-Dome camera.

Designed as the world's first and only 3G optimised board within the camera housing, the Mini-Dome boasts a low light sensitive colour camera with high-speed pan, tilt and zoom functionality and with class leading low weight and unlimited "no surprises" data package; the Mini-Dome can be viewed remotely and simply via any web-browser. It can also record data continuously or be programmed on condition-record basis, delivering high quality images upon demand.

Iain Borthwick said: 'both Rennicks and MTS always pride ourselves in offering the best quality products and with these new products within our portfolio, this is the start of an exciting future for the Rennicks Group of companies.
